

The Holkirk Quick Connector (QC) range are designed to streamline the setup of RF communication systems.

**Our Quick Connectors are a game-changer in the industry, allowing for rapid and secure connection of waveguides without the need for any tools.**

**Effortless Installation** The tool-free design of our Quick Connectors means you can easily attach or detach waveguides in the field, saving time and reducing complexity during installation or maintenance. This feature is particularly beneficial in challenging environments where carrying tools can be cumbersome.

**Secure and Reliable** Despite the simplicity of their use, these connectors do not compromise on performance. They provide a robust and secure connection that ensures optimal signal integrity and system reliability.

**Versatile Compatibility** Our Quick Connectors are compatible with a wide range of waveguide sizes and types, making them suitable for various applications across C-band, X-band, Ku-band, and Ka-band frequencies.

This innovative approach to waveguide connectivity exemplifies Holkirk's commitment to providing practical and efficient solutions to our customers' needs. For more information on how our Quick Connectors can benefit your operations, please reach out to our sales team.

Each quick connector comes with a dust cap to protect the unterminated waveguide

Example: Holkirk X-Band quick release feed arm and BUC connections

### Frequencies:

C - Band	WR137
X - Band	WR112
Ku-Band	WR75
Ka-Band	WR28

### Features:

- Lanyard dust caps
- O-ring sealed for moisture protection
- C, X, Ku and Ka-Band options
- Direct fixing for HPA/BUC

### Applications:

- Satellite communications systems
- Troposcatter solutions
- Medical amplifiers
